Continuation of 2. NOTE: The Applicants point out that the cited prior art fails to teach or suggest forming a continuous printable document by collating a plurality of hyper-text documents, and a monitoring application used to identify access patterns of a second application, which operates independently from the monitoring application (page 14, lines 2-6). The Examiner disagrees, because Nehab teaches the manual compilation of a list of hypertext documents for cutomizing web pages (col.3, line 15-col.4, lines 67, col.13, line 12-67, fig. 9A). Nehab fails to explicitly disclose: (a) monitoring a second application operating independently of said first application on said local machine, to identify access patterns of the second application and accessing the hyper-text documents including structure information. However, Davis discloses the creation of a customized web page based upon the monitoring, and tracking of user(s) interes patterns as selected on a web browser or second application (c.14,L.1-67). It would have been obvious to a person of ordinary skill in the art at the time of the invention to have combined the teachings of Nehab and Davis, because Davis teaches providing customized web pages, such as news, sports, entertainment pages, etc, without the necessity of active user's involvement, so as to provide customized web pages without the user's involvement.
